

Sailonet

Furling mainsail Radial cut - Venus range

Designed by our Sailonet design department, the mainsails are produced by partner-sailmakers which have been chosen based on their outstanding production qualities.

This range is particularly adapted for offshore cruising, charter and traveling.

The Venus range is made of Mylar laminated with Taffeta on each side. The radial cut allows using different types of cloth and weights to optimize performance.

The VENUS furling mainsails are equipped as standard with an UV protection by Sunbrella® (acrylic cloth) on both sides of the clew.

The complete equipment (head and tack webbing, furling marks, clew block) optimizes and enables easy handling with your furling mainsail.

All sails are sold with their bag, ready to sail.

Two year warranty.

Radial cut

Mylar laminated with double-backed Taffeta, radial cut for better shape control.

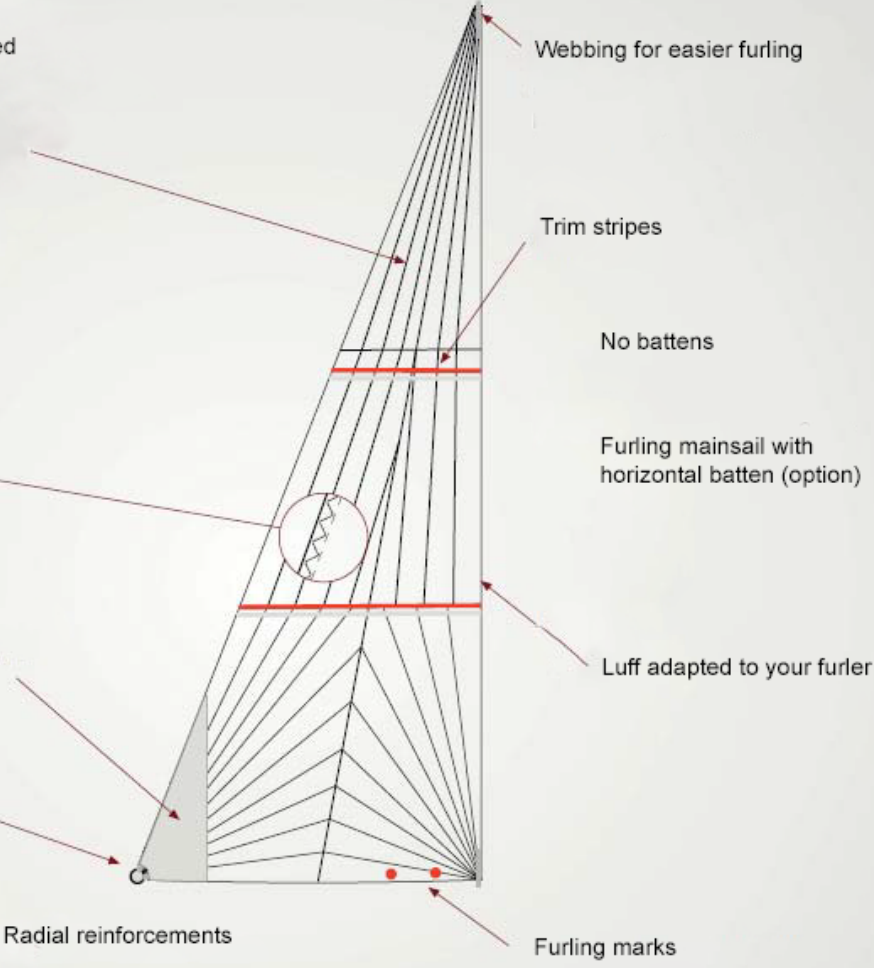

Assembled with 6 step zigzag Uv-protected yarn

Leech line fixed on camcleat at clew and reef

UV protection by Sunbrella® on each side of the clew

Clew block Rutgerson

Webbing for easier furling

Trim stripes

No battens

Furling mainsail with horizontal batten (option)

Luff adapted to your furler

Radial reinforcements

Furling marks
